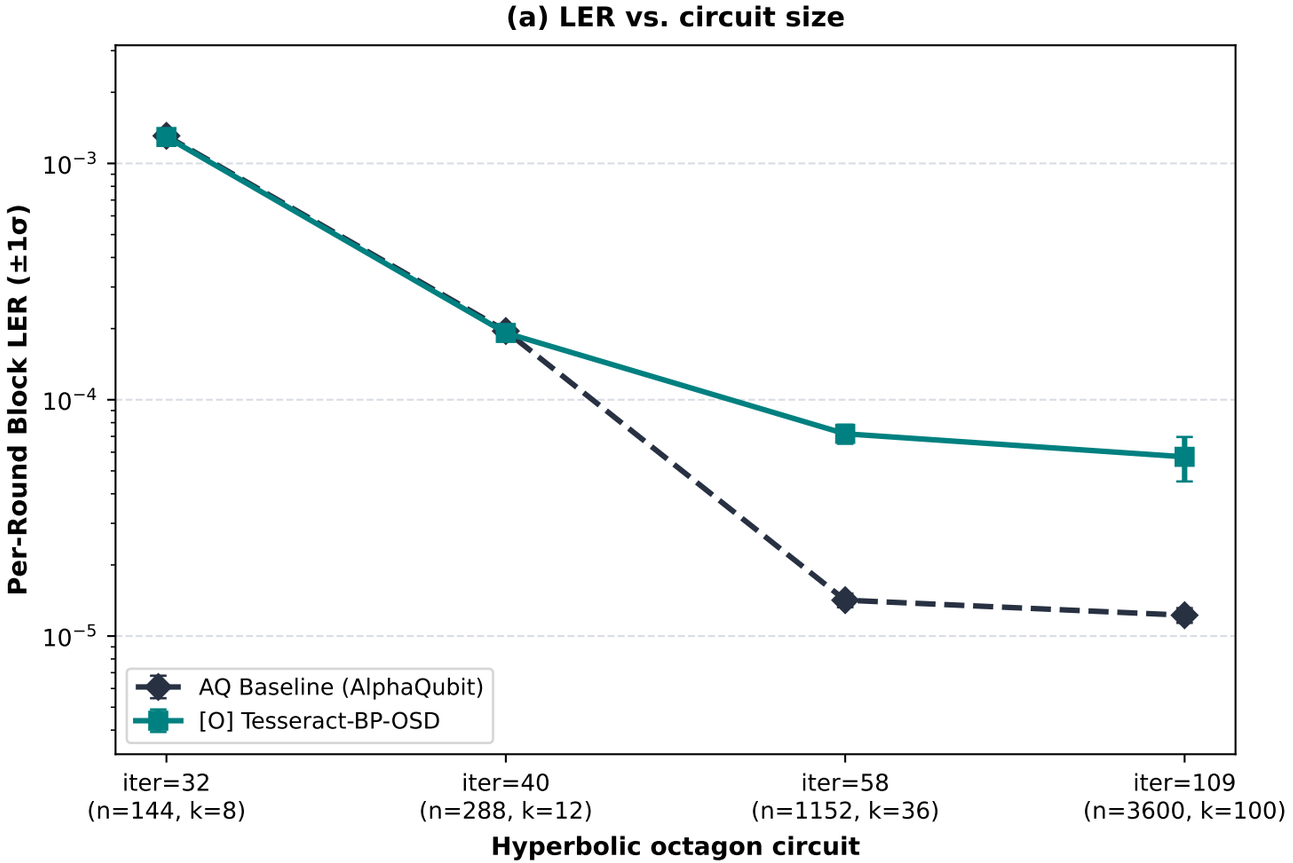
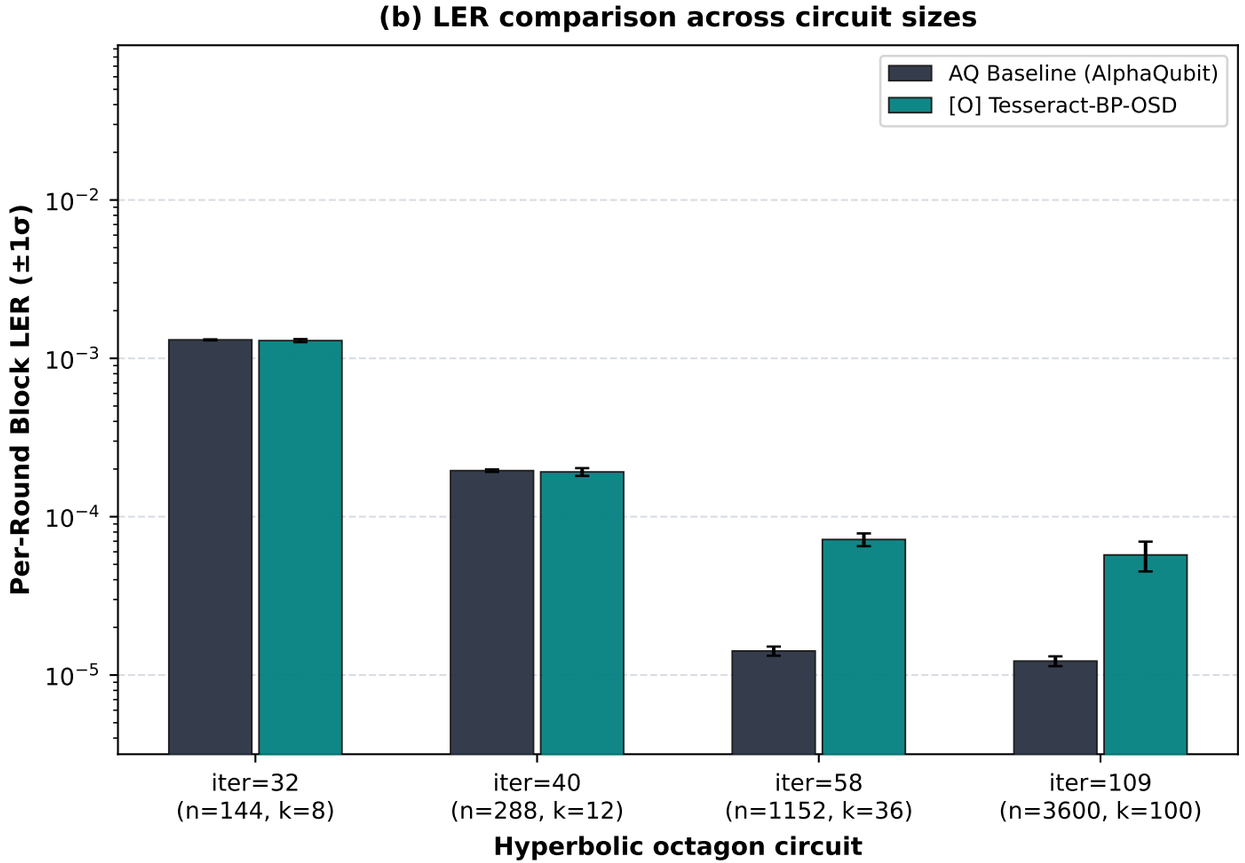
Hyperbolic Octagon Cat-Flagged Circuits (r=16, p=0.001, p_seam=0.01): Per-Round Block LER





Ratio < 1 means lower LER than AQ; |z| < 2σ is reported as a tie (σ from binomial shot noise).
iter=32: [O] 0.99x AQ, tie with AQ (0.5σ)
iter=40: [O] 0.98x AQ, tie with AQ (0.3σ)
iter=58: [O] 5.06x AQ, AQ has 5.1x lower LER (14.2σ)
iter=109: [O] 4.68x AQ, AQ has 4.7x lower LER (6.9σ)
